

## Keywords/Questions:

## Notes:

String: "Hello"

```
alert("Hello");
```

String

-Everything enclosed b/n quotation marks will be interpreted as a String by our browser.

Number: 1

"Hello" :- This is a string data type.

String :- text that's not meant to be interpreted as code

-just a string of characters.

boolean: true or false

## Other Data Types:-

Numbers

Boolean

-Variables

123

true false

alert(2+3);

typeof();

typeof() :-It will tell us the data type of whatever is in between the brackets.

```
> typeof(23);  
< "number"
```

```
> typeof("Angela");  
< "string"
```

```
> typeof(true);  
< "boolean"
```

```
> 2+3;  
< 5
```

```
> alert(2+3);  
< undefined
```

chrome://new-tab-page says

5

OK

## Summary: Data types:

-Numbers: are the no.s 1, 2, 3,...

-String: anything between " ". i.e: "Hello", "hale", ....

-Boolean: true & false

-variables

typeof():- tells us the type of our data type

alert(2+3); :- pops out 5. It pops out the computed result from our code.
