

## Keywords/Questions:

## Notes:

/\* ... \*/

/\* ..... \*/: commenting out in CSS.

What can we use as a selector in styling:

-html elements(tags):- all similar elements will be styled in similar ways.

-class:- different styling will be applied to different elements

emojipedia

Using html elements(tags) to style:

```
h1 {
  color: red;
  font-size: 200px;
}
```

All h1 tags in the website will have this particular styling.

class="bacon"

Using classes to style:

-We write a class attribute for each element.

```

```

styling with classes

-We then use the class attribute as a selector. The different thing about this compared to using html elements as selectors is that we start with a dot before writing the html element.

styling with elements

```
.bacon{
  background-color: blue;
}
.broccoli{
  background-color: green;
}
```

emojipedia:- a site for looking for emojis.

## Summary:

/\*.....\*/ :-commenting out in CSS.

emojipedia:-site for finding emojis.

What should we use as a Selector in CSS styling?

-HTML elements(tags):

-style every similar element in the same way.

-Classes

]

-start with a dot when written. Used to style similar elements in distinct ways.
